Watershed Management

My Novel Ecosystem

This novel ecosystem is located in my neighborhood, at 501 East Roger Road. It is in a drainage area behind my neighborhood's houses. There is very little human interaction here. It is possible that these plants are irrigated, however I did not see any evidence of this when there. The plants are very thick and provide great cover for animals, mainly lizards and birds. These plants were most likely planted, but have been left to their own devices for a little over a decade. This area is a drainage because water from the neighborhood and Roger Rd. are directed to here.
